

## R&M Loadmate Chain Hoist

### Overview:

The R&M Loadmate chain hoist is a versatile chain hoist it's third design generation. The Loadmate chain hoist is produced on three continents and used around the world. The loadmate chain hoist is available in rated capacities ranging from 250 pounds to five tons. The Loadmate chain hoist is available with three different suspension models: the top hook, the push trolley, and the motor trolley (figures 101-103, respectively).

Fig. 103

It's important to select the loadmate chain hoist that is correct for your application. If a trolley already exists and is compatible with hook-mount chain hoists, select the hook mount loadmate chain hoist. If the chain hoist is to operate on a beam, and no trolley exists, select the push trolley chain hoist. If the load requires constant movement or is unwieldy, and a brake is desired, choose the motorized trolley chain hoist.

### Durability Features:

- Thermal Protection of hoist motor.
- Cast Aluminum Hoist Body
- Heat Treated Chain Wheel
- Electro Zinc-plated chain wheel
- Sealed Brake

### Convenient Options:

The Loadmate chain hoist is available with certain options that make work easier and more productive.

- Variable Frequency Control
- Digichain ergonomic Control handle
