

Yale Hoists

The Yale electric hoist is famous for its durability. Dearborn Overhead Crane has been supplying Yale hoists for year, to important customers such as Toyota. Yale's primary product line is the Cable King electric hoist, in production for over forty years. The Cable King electric hoist is a wire rope hoist with a mechanical loadbrake. Although the Cable King electric hoist is a pricey product, the performance and durability are legendary. Yale also features the Global King wire rope hoist. The Global King is a modern hoist introduced in 2000, and is noted for it's regenerative secondary hoist brake. The regenerative secondary hoist brake takes the place of the mechanical load brake, allowing the hoist to have less moving parts for longer service life. The Cable King wire rope hoist and Global King wire rope hoist are available in base mount, double-girder, and single-girder application. Dearborn Overhead Crane can customize your Yale wire rope hoist to fit a special application, such a low headroom, high speed, or use of under-hook fitting or device.
