

Purchasing a Jib Crane and Hoist

It's easy to specify a jib crane and the hoist needed to operate the jib crane correctly. Although there is many types of jib cranes, Dearborn Overhead Crane typically sells three types of jib cranes. The floor-mounted jib crane (fig. 101), the wall-bracket jib crane (fig. 102), and the tie-rod jib crane (fig. 103) are the most popular types of jib cranes. Most jib cranes are equipped with a powered chain hoist, with a push trolley (fig. 104). Other jib cranes are equipped with a manually operated chain hoist with push trolley (fig. 105).
